14th Comprehensive Course on Disaster Risk Management

Date: 09 – 20 March 2026

Venue - NIDM, Rohini, Delhi

1. Introduction

India's unique geography and large population make it highly vulnerable to disasters. In recent decades, the frequency and intensity of both natural and anthropogenic disasters have significantly increased, posing critical threats to human life, infrastructure, and the environment. The country remains susceptible to many hazards, including floods, cyclones, earthquakes, droughts, landslides, and industrial accidents. This necessitates a strengthened focus on disaster preparedness, mitigation, response, and recovery across all sectors. Climate change is significantly amplifying the frequency and severity of disasters in India, increasing the country's vulnerability to extreme weather events. Rising temperatures have led to more frequent heat waves, erratic monsoon patterns, and intense rainfall, resulting in urban flooding in major cities. Coastal regions are witnessing rising sea levels and more intense cyclones due to warming oceans, leading to erosion, displacement, and infrastructure loss. In the Himalayas, rapid glacial melting is triggering flash floods, landslides, and glacial lake outburst floods. Agriculture is under threat from unseasonal rains and prolonged droughts, impacting food security and livelihoods. Additionally, the health of vulnerable populations is at risk due to a rise in vector-borne diseases. These changes demand urgent adoption of climate- and disaster-resilient strategies, including early warning systems, adaptive infrastructure, and community preparedness.

According to official reports, 27 of India's 36 States and Union Territories are disaster-prone. Approximately 58.6% of India's landmass is prone to earthquakes, 12% is vulnerable to floods, 5,700 km of the country's 7,516 km coastline is prone to cyclones and tsunamis, and 68% of cultivable land is drought-prone. Additionally, about 15% of the land area, mostly in hilly regions, is at risk of landslides (Source: NDMA, Annual Report, 2022–23). Over the past two and a half decades (2000–2025), India has faced numerous major disasters, resulting in significant loss of lives, economic losses and infrastructure damages.

Overview of Major Disaster Types and their Impacts in India (2000–2025)

Hazard Type	Events & Frequency	Fatalities (2000–2025)	Population Affected
Floods	17 events per year on average; increasingly frequent extreme rainfall events in recent years.	1,600 deaths per year on average (deadliest: 2013 Uttarakhand 6,054 deaths).	Millions affected yearly (7.5 million ha flooded annually; 345 million total affected 2000–2019).
Cyclones	Dozens of cyclonic storms, e.g., 41 cyclones (2012–2020). Peak season May–Nov (Bay of Bengal most active).	48% of disaster deaths (2000–19) were from cyclones, <i>though recent cyclones have lower death tolls</i> (e.g., 115 deaths in all 2020 cyclones). Historically high, but now often <100 per major cyclone due to evacuations.	Millions evacuated or affected per cyclone. E.g., Cyclone Amphan (2020) affected ~2.4 million people and destroyed 2.8 lakh houses (WB/Odisha) – with a massive humanitarian impact.
Earthquakes	Infrequent but severe. Major quakes: 2001 Bhuj (M7.7), 2005 Kashmir (M7.6), etc. Moderate quakes occur every few years in the Himalayan region.	Over 20,000 killed since 2000 (bulk from 2001 quake and 2004 tsunami). Quakes made up 33% of disaster deaths from 2000–2019.	Hundreds of thousands are displaced in major quakes. (2001: 600,000 homeless; 2004 tsunami: 650,000 displaced). Affected relatively fewer people vs. floods/droughts (localized impact zones).
Landslides	Seasonal/episodic events, esp. in monsoons. Dozens of significant landslides occur per year in vulnerable districts.	Typically, 200–400 deaths per year. Landslides and avalanches 2% of disaster deaths (except when coupled with floods, e.g., 2013).	Thousands are affected annually (mostly in hill communities). Individual large landslides can bury villages (e.g., 2013 Kedarnath, 2014 Malin).
Droughts	Major nationwide droughts in 2002, 2009, and 2015; localized droughts intermittently. Slow onset, often linked to monsoon failure or El Niño.	Direct deaths are negligible (droughts are “silent” disasters). Indirect impacts on health and livelihoods, though not counted as disaster fatalities.	Largest population affected: e.g., 300 million in the 2002 drought; tens of millions in other drought years. Causes mass distress, migration, and economic hardship in rural areas.

2. Need

The rising frequency and severity of disasters, both natural and anthropogenic hazards, climate change, rapid urbanization, and environmental degradation have made communities more vulnerable and there is a need for a greater focus on disaster

preparedness and mitigation. Traditionally, the approach to disasters was reactive, focusing primarily on relief and rehabilitation. However, contemporary Disaster Risk Management emphasizes a proactive risk reduction, requiring trained officers to assess vulnerabilities, implement early warning systems, and educate communities to build resilience.

Moreover, managing disasters has become a complex and multidisciplinary task, involving coordination across sectors such as health, infrastructure, and the environment, as well as the use of advanced technology such as GIS and remote sensing etc. Many regions, especially in developing countries, lack sufficient human resources to effectively carry out these tasks, leading to gaps in preparedness and response. Additionally, global commitments like the Sendai Framework for DRR and the Sustainable Development Goals underscore the importance of strengthening institutional capacities. The trained cadre of professionals plays a critical role not only during emergencies but also in long-term recovery and development, ensuring that affected areas can rebuild in a safer and more sustainable manner. Considering these aspects, NIDM is proposing to organize a two-week “Comprehensive Training Course on Disaster Risk Management” at NIDM, Rohini Campus.

3. Aim of the Course

To build the knowledge and skills of participants for effectively understanding, assessing, and managing disaster risks through a multi-hazard, multi-sectoral and technology-integrated approach, thereby contributing to a resilient and disaster-prepared India.

4. Learning Objectives of the Course

- To enhance the knowledge on hazard, vulnerability and risk prevailing across India.
- To enhance the understanding of national and global disaster management frameworks.
- To promote mainstreaming of DRR into development planning and sectoral policies.
- To provide exposure to post-disaster recovery planning and the Build Back Better approach.
- To introduce financial risk reduction tools and insurance mechanisms.

5. Target Group

Entry to mid-level officials (Group A and B) from the central, state and local governments, such as SDMA, ATIs, NDRF and SDRF, the Central Ministries/Departments, Universities/Institutions members under IUINDRR Network (NIDM's managed network), and others engaged with the disaster management field and involved in policymaking, governance, humanitarian aid, first response, etc., will make up the target group. Senior experts who work with other agencies and participate in related activities can also be invited.

7. Structure of the Training Module

The comprehensive training programme is a two-week course divided into seven modules, each addressing a critical aspect of disaster risk management. It begins with Module Zero, which includes an ice-breaking session, orientation, and pre and post-training evaluations. The course is structured across ten interconnected modules, beginning with orientation and progressing through key areas such as disaster management fundamentals, planning and risk assessment tools, climate and geological hazards, and strategic DRR approaches. It also covers science and technology applications, cross-cutting themes such as gender and inclusivity, and linkages between health and DRR. The final modules highlight NIDM's initiatives and conclude with assessment and reflection. Through lectures, case studies, and practical exercises, the program ensures a holistic and practice-oriented learning experience for effective disaster risk reduction.

Module - wise details are as follows:

Module Zero: Orientation and Evaluation Framework	The module Zero serves as the foundational layer of the two-week training programme. It sets the tone for the course, ensures structured feedback mechanisms and enables outcome-based learning through continuous evaluation. This module is designed to provide a clear understanding of the training flow, foster engagement from the outset and conclude the programme with impactful reflection and feedback.
Module 1: Basics of Disaster Management - Foundation and Genesis	This module lays the conceptual groundwork for understanding disaster management as a multidisciplinary field. It introduces participants to the evolution, legal framework and institutional mechanisms of disaster management in India and globally. The session explores fundamental definitions, types of hazards, vulnerability and capacity concepts while tracing the genesis of disaster management—from relief-centric approaches to holistic risk reduction. Through interactive discussions and short exercises,

	participants gain clarity on the disaster management cycle and its linkages with sustainable development. The module establishes a strong base for subsequent learning and effective participation in disaster risk reduction initiatives.
Module 2: Disaster Management Planning, Risk Assessment Tools, and Technologies	This module focuses on the strategic process of disaster management planning at various administrative levels. Participants learn about the framework, structure and components of Disaster Management Plans (DMPs), including the integration of risk assessment and mitigation measures. The module also introduces modern tools and technologies—such as GIS, Remote Sensing and data analytics—for hazard, vulnerability and capacity mapping. Case-based exercises and demonstrations help participants understand how these tools support evidence-based planning and decision-making. By the end of the module, participants will be able to apply analytical and technological approaches to develop robust and actionable DMPs.
Module 3: Understanding Climate-related Hazards – A Framework for Risk Reduction and Resilience	This module examines the growing challenges of climate-induced hazards such as droughts, heat waves, cyclones and floods within the broader context of climate change. It introduces the scientific basis of climate risks, the socio-economic impacts of extreme weather events, and the interconnections between climate adaptation and disaster risk reduction. Participants will explore frameworks and best practices for building resilience through community-based adaptation, early warning systems and ecosystem-based solutions. The module emphasizes proactive risk governance and resilience-building strategies, empowering participants to integrate climate risk considerations into disaster management and development planning.
Module 4: Geological Hazards – Risk, Preparedness and Resilience	This module focuses on understanding geological hazards such as earthquakes, landslides, avalanches and glacial lake outburst floods (GLOFs). Participants will explore the underlying causes, risk factors, and cascading impacts of these events, along with strategies for preparedness, mitigation and resilience-building. The module emphasizes the importance of scientific monitoring, early warning, structural safety and community preparedness in reducing disaster risks associated with geological phenomena. Case studies and field-based learning enhance participants' practical understanding of risk management in hazard-prone regions.
Module 5: DRR in Action – Strategic Approaches and Skills	This module emphasizes the translation of disaster risk reduction (DRR) principles into actionable strategies and practices. It covers planning and coordination mechanisms, post-disaster needs assessment (PDNA) and recovery frameworks to ensure sustainable and inclusive resilience building. Through simulations, role plays and case-based exercises, participants develop strategic thinking, communication and leadership skills essential for effective disaster management. The module encourages integrating DRR into development and governance systems to minimize vulnerabilities and strengthen institutional response capacities.
Module 6: Science and Technology in DRR	This module highlights the pivotal role of science, technology and innovation in modern disaster risk management. Participants will explore the applications of geospatial technologies, artificial intelligence (AI), remote sensing and data analytics in hazard mapping, risk assessment and early warning systems. Emphasis is

	placed on leveraging technology for real-time decision-making, forecasting and resilient infrastructure planning. The module aims to enhance participants' ability to integrate technological solutions into policy and practice for effective risk reduction.
Module 7: Cross-cutting Dimensions of Disaster Risk Reduction	This module examines the interconnected social, economic and environmental dimensions that influence disaster risk. It focuses on gender, inclusivity, governance, culture and education as critical cross-cutting themes in DRR. Participants will learn how to embed equity, participation, and communication into disaster management processes to ensure resilience for all. Interactive discussions and case examples highlight the need for mainstreaming these dimensions into planning, implementation and monitoring of DRR initiatives.
Module 8: Health and DRR	This module explores the interlinkages between public health and disaster risk reduction, emphasizing preparedness and response mechanisms for health emergencies. Participants will gain insights into managing epidemics, mental health impacts and health system resilience during disasters. The module underscores the importance of community engagement, early warning and coordination between health and disaster management agencies. Through case studies and policy frameworks, participants learn strategies to strengthen public health systems and safeguard vulnerable populations in crises.
Module 9: NIDM's Initiatives for Advancing DRR	This module introduces participants to the National Institute of Disaster Management's (NIDM) key programs, initiatives and capacity-building efforts in advancing DRR across India. It highlights NIDM's thematic centers, training frameworks, research and knowledge dissemination activities that contribute to national and international disaster resilience agendas. Participants will understand NIDM's collaborative role with ministries, state governments, academia and international agencies in promoting a culture of safety and preparedness. The module concludes by encouraging continued engagement and knowledge sharing within the NIDM network.
Assessment and Conclusion	It focuses on gathering participants' feedback and conducting the post-training assessment to evaluate the overall learning experience. It provides an opportunity to reflect on key takeaways, share insights, and identify areas for improvement. This phase marks the culmination of the training programme, reinforcing participants' preparedness to apply their enhanced knowledge and skills in advancing disaster risk reduction and management.

14th Comprehensive Course on Disaster Risk Management

Venue - NIDM, Rohini, Delhi

1. Introduction

India's unique geography and large population make it highly vulnerable to disasters. In recent decades, the frequency and intensity of both natural and anthropogenic disasters have significantly increased, posing critical threats to human life, infrastructure, and the environment. The country remains susceptible to many hazards, including floods, cyclones, earthquakes, droughts, landslides, and industrial accidents. This necessitates a strengthened focus on disaster preparedness, mitigation, response, and recovery across all sectors. Climate change is significantly amplifying the frequency and severity of disasters in India, increasing the country's vulnerability to extreme weather events. Rising temperatures have led to more frequent heat waves, erratic monsoon patterns, and intense rainfall, resulting in urban flooding in major cities. Coastal regions are witnessing rising sea levels and more intense cyclones due to warming oceans, leading to erosion, displacement, and infrastructure loss. In the Himalayas, rapid glacial melting is triggering flash floods, landslides, and glacial lake outburst floods. Agriculture is under threat from unseasonal rains and prolonged droughts, impacting food security and livelihoods. Additionally, the health of vulnerable populations is at risk due to a rise in vector-borne diseases. These changes demand urgent adoption of climate- and disaster-resilient strategies, including early warning systems, adaptive infrastructure, and community preparedness.

According to official reports, 27 of India's 36 States and Union Territories are disaster-prone. Approximately 58.6% of India's landmass is prone to earthquakes, 12% is vulnerable to floods, 5,700 km of the country's 7,516 km coastline is prone to cyclones and tsunamis, and 68% of cultivable land is drought-prone. Additionally, about 15% of the land area, mostly in hilly regions, is at risk of landslides (Source: NDMA, Annual Report, 2022–23). Over the past two and a half decades (2000–2025), India has faced numerous major disasters, resulting in significant loss of lives, economic losses and infrastructure damages.

Overview of Major Disaster Types and their Impacts in India (2000–2025)

Hazard Type	Events & Frequency	Fatalities (2000–2025)	Population Affected
Floods	17 events per year on average; increasingly frequent extreme rainfall events in recent years.	1,600 deaths per year on average (deadliest: 2013 Uttarakhand 6,054 deaths).	Millions affected yearly (7.5 million ha flooded annually; 345 million total affected 2000–2019).
Cyclones	Dozens of cyclonic storms, e.g., 41 cyclones (2012–2020). Peak season May–Nov (Bay of Bengal most active).	48% of disaster deaths (2000–19) were from cyclones, <i>though recent cyclones have lower death tolls</i> (e.g., 115 deaths in all 2020 cyclones). Historically high, but now often <100 per major cyclone due to evacuations.	Millions evacuated or affected per cyclone. E.g., Cyclone Amphan (2020) affected ~2.4 million people and destroyed 2.8 lakh houses (WB/Odisha) – with a massive humanitarian impact.
Earthquakes	Infrequent but severe. Major quakes: 2001 Bhuj (M7.7), 2005 Kashmir (M7.6), etc. Moderate quakes occur every few years in the Himalayan region.	Over 20,000 killed since 2000 (bulk from 2001 quake and 2004 tsunami). Quakes made up 33% of disaster deaths from 2000–2019.	Hundreds of thousands are displaced in major quakes. (2001: 600,000 homeless; 2004 tsunami: 650,000 displaced). Affected relatively fewer people vs. floods/droughts (localized impact zones).
Landslides	Seasonal/episodic events, esp. in monsoons. Dozens of significant landslides occur per year in vulnerable districts.	Typically, 200–400 deaths per year. Landslides and avalanches 2% of disaster deaths (except when coupled with floods, e.g., 2013).	Thousands are affected annually (mostly in hill communities). Individual large landslides can bury villages (e.g., 2013 Kedarnath, 2014 Malin).
Droughts	Major nationwide droughts in 2002, 2009, and 2015; localized droughts intermittently. Slow onset, often linked to monsoon failure or El Niño.	Direct deaths are negligible (droughts are “silent” disasters). Indirect impacts on health and livelihoods, though not counted as disaster fatalities.	Largest population affected: e.g., 300 million in the 2002 drought; tens of millions in other drought years. Causes mass distress, migration, and economic hardship in rural areas.

2. Need

The rising frequency and severity of disasters, both natural and anthropogenic hazards, climate change, rapid urbanization, and environmental degradation have made communities more vulnerable and there is a need for a greater focus on disaster

preparedness and mitigation. Traditionally, the approach to disasters was reactive, focusing primarily on relief and rehabilitation. However, contemporary Disaster Risk Management emphasizes a proactive risk reduction, requiring trained officers to assess vulnerabilities, implement early warning systems, and educate communities to build resilience.

Moreover, managing disasters has become a complex and multidisciplinary task, involving coordination across sectors such as health, infrastructure, and the environment, as well as the use of advanced technology such as GIS and remote sensing etc. Many regions, especially in developing countries, lack sufficient human resources to effectively carry out these tasks, leading to gaps in preparedness and response. Additionally, global commitments like the Sendai Framework for DRR and the Sustainable Development Goals underscore the importance of strengthening institutional capacities. The trained cadre of professionals plays a critical role not only during emergencies but also in long-term recovery and development, ensuring that affected areas can rebuild in a safer and more sustainable manner. Considering these aspects, NIDM is proposing to organize a two-week “Comprehensive Training Course on Disaster Risk Management” at NIDM, Rohini Campus.

3. Aim of the Course

To build the knowledge and skills of participants for effectively understanding, assessing, and managing disaster risks through a multi-hazard, multi-sectoral and technology-integrated approach, thereby contributing to a resilient and disaster-prepared India.

4. Learning Objectives of the Course

- To enhance the knowledge on hazard, vulnerability and risk prevailing across India.
- To enhance the understanding of national and global disaster management frameworks.
- To promote mainstreaming of DRR into development planning and sectoral policies.
- To provide exposure to post-disaster recovery planning and the Build Back Better approach.
- To introduce financial risk reduction tools and insurance mechanisms.

5. Target Group

Entry to mid-level officials (Group A and B) from the central, state and local governments, such as SDMA, ATIs, NDRF and SDRF, the Central Ministries/Departments, Universities/Institutions members under IUINDRR Network (NIDM's managed network), and others engaged with the disaster management field and involved in policymaking, governance, humanitarian aid, first response, etc., will make up the target group. Senior experts who work with other agencies and participate in related activities can also be invited.

7. Structure of the Training Module

The comprehensive training programme is a two-week course divided into seven modules, each addressing a critical aspect of disaster risk management. It begins with Module Zero, which includes an ice-breaking session, orientation, and pre and post-training evaluations. The course is structured across ten interconnected modules, beginning with orientation and progressing through key areas such as disaster management fundamentals, planning and risk assessment tools, climate and geological hazards, and strategic DRR approaches. It also covers science and technology applications, cross-cutting themes such as gender and inclusivity, and linkages between health and DRR. The final modules highlight NIDM's initiatives and conclude with assessment and reflection. Through lectures, case studies, and practical exercises, the program ensures a holistic and practice-oriented learning experience for effective disaster risk reduction.

Module - wise details are as follows:

Module Zero: Orientation and Evaluation Framework	The module Zero serves as the foundational layer of the two-week training programme. It sets the tone for the course, ensures structured feedback mechanisms and enables outcome-based learning through continuous evaluation. This module is designed to provide a clear understanding of the training flow, foster engagement from the outset and conclude the programme with impactful reflection and feedback.
Module 1: Basics of Disaster Management - Foundation and Genesis	This module lays the conceptual groundwork for understanding disaster management as a multidisciplinary field. It introduces participants to the evolution, legal framework and institutional mechanisms of disaster management in India and globally. The session explores fundamental definitions, types of hazards, vulnerability and capacity concepts while tracing the genesis of disaster management—from relief-centric approaches to holistic risk reduction. Through interactive discussions and short exercises,

	participants gain clarity on the disaster management cycle and its linkages with sustainable development. The module establishes a strong base for subsequent learning and effective participation in disaster risk reduction initiatives.
Module 2: Disaster Management Planning, Risk Assessment Tools, and Technologies	This module focuses on the strategic process of disaster management planning at various administrative levels. Participants learn about the framework, structure and components of Disaster Management Plans (DMPs), including the integration of risk assessment and mitigation measures. The module also introduces modern tools and technologies—such as GIS, Remote Sensing and data analytics—for hazard, vulnerability and capacity mapping. Case-based exercises and demonstrations help participants understand how these tools support evidence-based planning and decision-making. By the end of the module, participants will be able to apply analytical and technological approaches to develop robust and actionable DMPs.
Module 3: Understanding Climate-related Hazards – A Framework for Risk Reduction and Resilience	This module examines the growing challenges of climate-induced hazards such as droughts, heat waves, cyclones and floods within the broader context of climate change. It introduces the scientific basis of climate risks, the socio-economic impacts of extreme weather events, and the interconnections between climate adaptation and disaster risk reduction. Participants will explore frameworks and best practices for building resilience through community-based adaptation, early warning systems and ecosystem-based solutions. The module emphasizes proactive risk governance and resilience-building strategies, empowering participants to integrate climate risk considerations into disaster management and development planning.
Module 4: Geological Hazards – Risk, Preparedness and Resilience	This module focuses on understanding geological hazards such as earthquakes, landslides, avalanches and glacial lake outburst floods (GLOFs). Participants will explore the underlying causes, risk factors, and cascading impacts of these events, along with strategies for preparedness, mitigation and resilience-building. The module emphasizes the importance of scientific monitoring, early warning, structural safety and community preparedness in reducing disaster risks associated with geological phenomena. Case studies and field-based learning enhance participants' practical understanding of risk management in hazard-prone regions.
Module 5: DRR in Action – Strategic Approaches and Skills	This module emphasizes the translation of disaster risk reduction (DRR) principles into actionable strategies and practices. It covers planning and coordination mechanisms, post-disaster needs assessment (PDNA) and recovery frameworks to ensure sustainable and inclusive resilience building. Through simulations, role plays and case-based exercises, participants develop strategic thinking, communication and leadership skills essential for effective disaster management. The module encourages integrating DRR into development and governance systems to minimize vulnerabilities and strengthen institutional response capacities.
Module 6: Science and Technology in DRR	This module highlights the pivotal role of science, technology and innovation in modern disaster risk management. Participants will explore the applications of geospatial technologies, artificial intelligence (AI), remote sensing and data analytics in hazard mapping, risk assessment and early warning systems. Emphasis is

	placed on leveraging technology for real-time decision-making, forecasting and resilient infrastructure planning. The module aims to enhance participants' ability to integrate technological solutions into policy and practice for effective risk reduction.
Module 7: Cross-cutting Dimensions of Disaster Risk Reduction	This module examines the interconnected social, economic and environmental dimensions that influence disaster risk. It focuses on gender, inclusivity, governance, culture and education as critical cross-cutting themes in DRR. Participants will learn how to embed equity, participation, and communication into disaster management processes to ensure resilience for all. Interactive discussions and case examples highlight the need for mainstreaming these dimensions into planning, implementation and monitoring of DRR initiatives.
Module 8: Health and DRR	This module explores the interlinkages between public health and disaster risk reduction, emphasizing preparedness and response mechanisms for health emergencies. Participants will gain insights into managing epidemics, mental health impacts and health system resilience during disasters. The module underscores the importance of community engagement, early warning and coordination between health and disaster management agencies. Through case studies and policy frameworks, participants learn strategies to strengthen public health systems and safeguard vulnerable populations in crises.
Module 9: NIDM's Initiatives for Advancing DRR	This module introduces participants to the National Institute of Disaster Management's (NIDM) key programs, initiatives and capacity-building efforts in advancing DRR across India. It highlights NIDM's thematic centers, training frameworks, research and knowledge dissemination activities that contribute to national and international disaster resilience agendas. Participants will understand NIDM's collaborative role with ministries, state governments, academia and international agencies in promoting a culture of safety and preparedness. The module concludes by encouraging continued engagement and knowledge sharing within the NIDM network.
Assessment and Conclusion	It focuses on gathering participants' feedback and conducting the post-training assessment to evaluate the overall learning experience. It provides an opportunity to reflect on key takeaways, share insights, and identify areas for improvement. This phase marks the culmination of the training programme, reinforcing participants' preparedness to apply their enhanced knowledge and skills in advancing disaster risk reduction and management.
